

**These bills allow utilities to charge customers for the cost of construction a powerplant before the customers even benefit from the energy produced. This concept - "Construction Work in Progress" or CWIP - is often used by the nuclear power industry. Missouri needs investment in safe, reliable renewable energy, not dangerous, expensive nuclear power.**

**DON'T UNDO THE VOTE OF THE PEOPLE**

**HB 50** would undo the long-standing ban on Construction Work In Progress (CWIP) that passed in 1976 under Proposition 1 with 63% of the statewide vote.

**MISSOURIANS MONEY SHOULD GO  
TOWARD SAFE, RELIABLE SOURCES, LIKE  
WIND AND SOLAR**

Missourians can't afford to spend money on a powerplant they may never benefit from.

**LEARN FROM THE MANHATTAN PROJECT. NUCLEAR  
WASTE HARMS COMMUNITIES FOR DECADES.**

The devastating impacts of low-level uranium exposure in North St. Louis County from improper waste management from the Manhattan Project should tell you this is wrong for Missourians. The waste from nuclear power plants is high-level uranium - the health consequences are unfathomable!

**CWIP is wrong for Missourians' health, pocketbooks,  
and energy future. Vote "NO" on HB 50.**
